CRYPTOROBOTICS ENTERPRISE EXCLUSIVE VERSION

We have analyzed the activity of many cryptocurrency funds and came to the conclusion that the company that manages a large amount of cash in cryptocurrency needs a unique solution for cryptotrading

That's why we are glad to announce the **CryptoRobotics Enterprise** version with unique features unavailable for the mass of users.

Date of full package release 31st of January 2019

1. Multiple accounts

Our enterprise users can add multiple accounts (API-keys) on the same exchange making it much easier to handle fiduciary management of your client's funds.

2. Order execution bot

An optimized order execution algorithm was designed to break down the lot and pick the price with the highest chance of execution and maximum trading profits. It saves up to 1% on each trade. And it is much more convenient than working with OTC brokers, or if you are an OTC broker – this tool can be a perfect addition to your automation stack.

For example, we set 1 000 BTC for sale. The bot divides the order on smaller ones, e.g. 10 BTC each and after executing repeats the procedure with the same price or higher until the whole amount sold

3. Rebalancing bot

A bot that keeps up your portfolio in the perfect order. If one coin goes up, the bot sells surplus and vice-versa if the coin goes down the bot buys necessary amount.

Portfolio composition can be modified online or by schedule, and the bot will automatically put your strategy in action.

4. Panic sell bot

A separate interface that allows you to close all positions on every account on every exchange or on a separate exchange according to the pre-set parameters.

Close all positions on every exchange and account to BTC in one click

Close all positions on every exchange and account and convert to USD/stablecoin

Close all position on a specific exchange

Close all positions on a specific account

The pre-set parameters are following: the choice of a currency pair not sold after the all emergency closure for all positions basic function.

5. Advanced managerial analytics

Download extended statistics in MS Excel or machine-readable formats on every transaction and every account

Dashboard for profits/loss reports, open positions and purchase statistics with charts

Forecasts and predictions of your possible financial outcomes based on your previous operations and positions opened

6. Special conditions on exchanges on a dedicated channel with a reduced commission fee for making deposits, withdrawing and market making.

7. 24/7 priority online support

Terminal technical support

Technical support and bots&tools settings support

Priority consideration of proposals for tools upgrade or adding new features

Priority consideration of rate proposals

FREEMIUM MARGIN TRADING BOT

Crypto trading with leverage. The bot takes speedy decisions and trades effectively on main price movements both with upward and downward trend. The exclusive offer only for CryptoRobotics Enterprise version users.

8. Market Maker bots'

1. **“Offer-marker” bot** – the trading algorithm created to maintain liquidity on the market
2. **“BUY-hunt / SELL-hunt” bot** – the algorithm for setting positions and keeping the level needed.
3. **“Repeating patterns” bot** – the algorithm that buys/sells the certain amount of orders at certain intervals on the exchange.
4. **“Flipping” bot** – the algorithm of setting limit orders from one side of the exchange.
5. **“Iceberg” bot** – the offer with visible and hidden part.
6. **Controller bot** – the algorithm of monitoring and managing bots 1-5.
